Computer Methods and Programs in Biomedicine, 33 (1990) 263–264
Elsevier

Subject index

Ambulance requirement, (33) 59
Analysis of variance, (33) 109
Anesthesia, (33) 119
ANOVA, (33) 95
Attachment loss, (33) 35

BASIC, (33) 13; (33) 107
Bioassay, (33) 95
Biochemical model, complex, (33) 13
Biomedical computing, (33) 87
Biomedical statistics, (33) 109
Bleeding on probing, (33) 35
Bootstrap methods, (33) 87
Brown-Forsythe statistic, (33) 241

Comparative statistics, (33) 109
Computed tomography image analysis, (33) 221
Computer, (33) 21; (33) 65
Computer-aided histomorphometry, (33) 49
Computer-aided measurement, (33) 43
Computer heart model, (33) 27
Computer program, (33) 93
Computer programs for experimental design, (33) 181
Concentration calculation, (33) 93
Confounding, (33) 1
Convolution, (33) 181
Crossing hazards, (33) 87

Data structure, (33) 165
$DD_x\&T_x$, (33) 21
Decision support system, (30) 159
Dentistry, (33) 21
Diagnostics, (30) 159
Digitizing tablet, (33) 49
DNA fluorometric assay, (33) 189
D-optimal design, (33) 181

Episodic hormone secretion, (33) 145
Expert system, (33) 175; (33) 255

Family structure, (33) 9

Gamma spectrum analysis, (33) 65
Gaussian curve, (33) 107
Generator seeding, (33) 171
Glucose tolerance, (33) 193

Hydromotive pressure, (33) 27

IBM-compatible microcomputer, (33) 171
IBM microcomputer, (33) 171
Image analysis, (33) 221
Image database, (33) 213
Image distribution, (33) 213
Image processing, (33) 213
Inhibition/promotion experiment, (33) 1
Insulin sensitivity, (33) 193
Intensive care, (33) 175
Interexaminer agreement, (33) 35
Isoenzyme, (33) 205

James statistics, (33) 241

Kappa statistic, (33) 35
Kinetics, transient, (33) 13
Knowledge base, (33) 255
Knowledge-based analysis, (33) 221
Knowledge-based system, (30) 159
Kruskal-Wallis statistic, (33) 241

Lexicographic generation, (33) 165
Likelihood ratio test, (33) 1
Linear regression, (33) 189
Luteinizing hormone, (33) 145

Magnetic tape image format, (33) 213
Mathematical modeling, (33) 193
Maximum likelihood, (33) 1
Medical image analysis, (33) 221
Medical-vision system, (33) 221
Metal-ligand, (33) 93
Muscle relaxation, (33) 119

Neuronal tree, (33) 165
Nutritional management, (33) 175

Operation research, (33) 59
Optimization, (33) 135

Parallel computing, (33) 119
Parallel line analysis, (33) 95
Parameter estimation, (33) 193
Pascal computer program, (33) 189
Pedigree data, (33) 9
Periodontal research, (33) 35
Pharmacokinetic/pharmacodynamic modeling, (33) 181
Physiological modeling, (33) 181

Pocket depth, (33) 35
Point process, (33) 145
Positive feedback, (33) 27
Proportional hazards regression, (33) 87
Pulse detection, (33) 145

Radiation therapy, (33) 135
Radioactive microsphere, (33) 65
Random number generator, (33) 171
Recurrent event, (33) 145
Regional blood flow, (33) 65
Regression analysis, (33) 109
Rhythmic acoustical stimulation, (33) 43
Risk evaluation, (33) 107
Robust analysis of variance, (33) 241

Sampling, (33) 145
Self-organising control system, (33) 119
Semantic net, (30) 159
Semi-parametric model, (33) 181
Serial correlation, (33) 171
Set projection, (30) 159
Similarity coefficient, (33) 205
Simulation, (33) 21; (33) 135
Skin tumor, (33) 1
Software, (33) 109
Software packages, (33) 87
Solution, (33) 93
Source resistance, (33) 27
SPICE, (33) 27
Starling's law, Congestive heart failure, (33) 27
Statistical analysis, (33) 65
Statistical knowledge-based system, (33) 255
Statistical test, (33) 171
Statistics, (33) 107; (33) 109
Steppermotor control software, (33) 49
Stereotaxy, (33) 213

Tapping, (33) 43
Tissue complication probabilities, (33) 135
Transputer, (33) 119
Treatment planning, (33) 135
Trypanosomiasis, (33) 205
Two-step models, (33) 87
Type I censoring, (33) 1

Uniformity, (33) 171

Welch statistic, (33) 241
Window based software, (33) 213

Adamec, M., see Šedo, A. (33) 189
Alonso, G.L., see Hecht, J.P. (33) 13

Barnwell, G.M., see Boushka, W.M. (33) 35
Best, J.D., see Martin, I.K. (33) 193
Boston, R.C., see Martin, I.K. (33) 193
Boushka, W.M., Marinez, Y.N., Prihoda, T.J., Dunford, R. and Barnwell, G.M.
A computer program for calculating kappa: application to interexaminer agreement in periodontal research (33) 35

Chandran, A.J., see Singh, V.K. (33) 59
Chard, T., see Schreiner, A. (33) 107
Cibulskis, R.E., see Stevens, J.R. (33) 205
Clancy, J.M.S., Johnson, L., Finkelstein, M.W. and Lilly, G.E.
Dental Diagnosis and Treatment (DD_x&T_x): interactive videodisc patient simulations for dental education (33) 21
Cugini, P., Leone, G., Sepe, M. and Di Palma, L.
Parallelism test on microcomputers for statistically comparing regression lines of bivariate data sets (33) 109

Damron, K.L., see Swank, P.R. (33) 95
De Nicolao, G., Guardabasso, V. and Rocchetti, M.
The relationship between rate of venous sampling and visible frequency of hormone pulses (33) 145
Dey, B.R., see Singh, V.K. (33) 59
Dhawan, A.P. and Juvvadi, S.
Knowledge-based analysis and understanding of medical images (33) 221
Di Palma, L., see Cugini, P. (33) 109
Döler, W., see Jäger, A. (33) 49
Dunford, R., see Boushka, W.M. (33) 35

Elvidge, C., see Schreiner, A. (33) 107

Finkelstein, M.W., see Clancy, J.M.S. (33) 21
Fitzpatrick, J.M., see Mandava, V.R. (33) 213
Fraser, R.B. and Turney, S.Z.
An expert system for the nutritional management of the critically ill (33) 175

Gleason, J.M.
Empirical tests of the intrinsic pseudorandom number generator on IBM-compatible microcomputers (33) 171
Goldstein, L.J., Levenson, H. and Rypins, E.B.
A computer model of the heart that obeys Starling's law (33) 27
Gross, W., Schosser, R. and Messmer, K.
MIC-III — an integrated software package to support experiments using the radioactive microsphere technique (33) 65
Guardabasso, V., see De Nicolao, G. (33) 145

Hasnain, S.B., see Linkens, D.A. (33) 119
Hecht, J.P., Nikonov, J.M. and Alonso, G.L.
A BASIC program for the numerical solution of the transient kinetics of complex biochemical models (33) 13

Jäger, A., Döler, W. and Sattler, G.
Semiautomatic method for histomorphometry (33) 49
Johnson, L., see Clancy, J.M.S. (33) 21
Juvvadi, S., see Dhawan, A.P. (33) 221

Kahn, Jr., C.E.
Family structure: a general program for displaying complex pedigree data (33) 9
Kokoska, S. and Urlwin, J.
A computer program for the statistical analysis of cancer inhibition/promotion experiments (33) 1
Kretschmar, T., see Wieding, J.U. (30) 159

Lane, R.G., see Morrill, S.M. (33) 135
Leone, G., see Cugini, P. (33) 109
Levenson, H., see Goldstein, L.J. (33) 27
Lewis, M.L., see Swank, P.R. (33) 95
Lilly, G.E., see Clancy, J.M.S. (33) 21
Linkens, D.A. and Hasnain, S.B.
Self-organising learning control and its application to muscle relaxant anaesthesia (33) 119

Maciunas, R.J., see Mandava, V.R. (33) 213
Mandava, V.R., Maciunas, R.J. and Fitzpatrick, J.M.
TAPETOOL: a software tool for importing image data from image acquisition computers to image processing computers (33) 213
Marinez, Y.N., see Boushka, W.M. (33) 35
Martin, I.K., Weber, K.M., Ward, G.M., Best, J.D. and Boston, R.C.
Application of the SAAM modeling program to minimal model analysis of intravenous glucose tolerance test data (33) 193
Mates, J.
A system of personal computer control programs for tapping experiments (33) 43
Messmer, K., see Gross, W. (33) 65

0169-2607/90/$03.50 © 1990 Elsevier Science Publishers B.V. (Biomedical Division)

Morrill, S.M., Lane, R.G. and Rosen, I.I.
Constrained simulated annealing for optimized radiation therapy treatment planning (33) 135
Morrison, D.R., see Swank, P.R. (33) 95

Nikonov, J.M., see Hecht, J.P. (33) 13

O'Quigley, J., see Pessione, F. (33) 87

Pallo, J.M.
A simple algorithm for generating neuronal dendritic trees (33) 165
Pessione, F. and O'Quigley, J.
Homogeneity of relative risk against two-step alternatives (33) 87
Prihoda, T.J., see Boushka, W.M. (33) 35

Reed, III, J.F.
Robust analysis of variance with Turbo Pascal (33) 241
Rocchetti, M., see De Nicolao, G. (33) 145
Rosen, I.I., see Morrill, S.M. (33) 135
Rypins, E.B., see Goldstein, L.J. (33) 27

Sattler, G., see Jäger, A. (33) 49
Schosser, R., see Gross, W. (33) 65
Schreiner, A., Elvidge, C. and Chard, T.
BASIC programs for the quantitative analysis of Gaussian curves (33) 107
Schubert, R.
A program for calculating multiple metal-ligand solutions (33) 93
Šedo, A. and Adamec, M.
A Pascal program for computing the DNA concentration in cellular homogenates (33) 189
Sepe, M., see Cugini, P. (33) 109
Singh, V.K., Chandran, A.J. and Dey, B.R.
Operation research for estimation of ambulance requirement in a hospital (33) 59
Stevens, J.R. and Cibulskis, R.E.
Analysing isoenzyme band patterns using similarity coefficients: a personal computer program (33) 205
Swank, P.R., Lewis, M.L., Damron, K.L. and Morrison, D.R.
Parallel line analysis: multifunctional software for the biomedical sciences (33) 95

Turney, S.Z., see Fraser, R.B. (33) 175

Urlwin, J., see Kokoska, S. (33) 1

Verotta, D.
An application of the D-optimal criterion to define the experimental design for a particular class of semi-parametric models (33) 181

Ward, G.M., see Martin, I.K. (33) 193
Weber, K.M., see Martin, I.K. (33) 193
Wieding, J.U. and Kretschmar, T.
Application of a network structure in a knowledge-based system for medical diagnostics (30) 159
Wittkowski, K.M.
Statistical knowledge-based systems – critical remarks and requirements for approval (33) 255
